PROFESSIONAL SUMMARY

Backend-Focused Full-Stack Engineer with hands-on experience building scalable RESTful APIs, distributed architectures, and interactive user interfaces using Node.js (Express.js), Java (Spring Boot/Microservices), and React.js. Adept at bridging the gap between client-side state management and robust server-side data persistence.

CORE TECHNICAL SKILLS

- **Backend Frameworks:** Java, Spring AI, Spring Boot, Spring Cloud (Microservices), Node.js, Express.js
- **Frontend Frameworks:** React.js, JavaScript (ES6+), HTML5, CSS3
- **Databases & Tools:** Git, GitHub, Postman API Client, RESTful API Design, PostgreSQL, Hibernate, Mongoose

PROJECTS

Edutech Microservices Application (Ongoing)
Java, Spring Boot, Spring Cloud, Eureka, API Gateway

- Engineered a distributed financial platform using a decoupled Spring Boot microservices architecture to safely isolate system capabilities.
- Implemented service registration, discovery orchestration, and dynamic path routing using Spring Cloud Gateway and Eureka Service Discovery.
- Built secure intra-service messaging pipelines to safely pass structured ledger payloads between accounting logic blocks.

Dishify (Ongoing)
Node.js, Express.js, JavaScript, React.js

- Developed a complete web solution coordinating full-stack data mutations through an automated Express.js backend and modular React.js rendering layers.
- Structured uniform JSON payload schemas across custom API endpoints to securely update interface states during user actions.
- Programmed transactional routing flows optimizing asynchronous database updates for state preservation.

Golf Charity Application
Node.js, Express.js, JavaScript

- Architected server environments processing core logic workflows, user donation matching rules, and active campaign aggregation.
- Crafted clean REST endpoints connecting internal application queries to specialized operational metrics.

Card Validation API
Node.js, Express.js, Algorithms

- Implemented a single-endpoint micro-utility executing high-performance data verification workflows.
- Configured algorithmic sanitization filters leveraging mathematical Luhn Algorithm properties to identify formatting integrity anomalies.
- Designed clean HTTP error response mappings providing instantaneous structure validation feedbacks.

EDUCATION

B.Sc. Computer Science
Obafemi Awolowo University (OAU), Osun State, Nigeria
